

Title:

Criminal Detention Portal

1. Introduction

The Criminal Detention Portal is a digital system developed to efficiently manage prisoner information, crime records, daily activity logs, release schedules, interviews, and prison movements. Traditionally, these registers are maintained manually, leading to delays, mismatched data, and human errors. This project replaces manual registers with a structured and automated database-driven system using Java, JDBC, and MySQL.

The portal helps police officers, prison authorities, and government officials view, add, update, and track real-time information related to prisoners.

2. Objectives

1. To create a centralized digital system for managing prison-related records.
2. To automate daily registers such as release logs, interview logs, and duty registers.
3. To provide secure CRUD operations for prisoner data.
4. To ensure accurate tracking of prisoners moving in and out of detention.
5. To simplify report generation for officials and decision-makers.
6. To reduce manual errors and improve operational efficiency.

3. Functional Requirements

User Requirements

- Users must be able to log in using a valid username and password.
- Users should be able to perform CRUD operations on each register.
- System must allow searching prisoner records using ID, name, crime, or date.
- Users should be able to generate daily, weekly, or monthly reports.
- System should provide confirmation messages for insert, update, and delete operations.

System Requirements

- Programming Language: Java
- Database: MySQL
- Connectivity: JDBC Driver
- IDE: Eclipse
- Architecture: CLI-based system

Functional Modules

1. Login & Registration
2. Prisoner Details Management
3. Case Register
4. Duty Register
5. Interview Register
6. In-Out Register
7. Automated Release Generator
8. Reports Module (Day-wise, Date-wise, Month-wise)

4. Features of the Project

1. Prisoner Case Register

- Stores prisoner details
- Crime details
- Items/articles surrendered
- Capture date of entry

2. Automated Release Date Generator

- Generates release dates automatically based on sentence duration
- Displays list for selected day, week, or month

3. Duty Register

- Tracks daily duty activity
- Logs "who was where, when, and why"

4. Interview Register

- Records requests by relatives
- Saves interview dates, status, and officer responses

5. In-Out Register

- Tracks movement of each prisoner
- Records the reasons for going out (court hearing, hospital, transfer)
- Records return time and officer in charge

6. Reports Module

- Generates summary reports
- Day-wise
- Week-wise
- Month-wise

7. Secure Login System

- Stores encrypted credentials
- Prevents unauthorized access

5. Technology Used

Component	Details
Programming Language	Java
Database	MYSQL
Connectivity	JDBC
Architecture	CLI-based
Tools Used	Eclipse, MYSQL workbench

6. ER Diagram
